### Abstract

*A teaching aid is anything used by a teacher to help teach a lesson or make it more interesting to students. Teaching aids can come in almost any form. Some of the most common are pictures, videos, charts, flashcards, objects, like three-dimensional models, Animations, White board and pen, Power point presentation and Digital pen and slate. These teaching aid's are also used in online teaching learning process through platforms like zoom, Google meet, webex and Google classroom and so on. In addition to the same methods and systems used in normal classrooms are also used in the virtual classroom or E- learning practices, through enhancement of technical skills by using self learning methods and recorded videos. A student can learn things without meeting a teacher face to face. Even though there are many difference between the normal classroom and the virtual classroom, there are many positive vibes in the online class like learning from home, listening to lectures clearly ,avoiding disturbances unlike in the ordinarily classrooms, re visiting the lessons, videos without wasting teachers and learners attention, time and energy. Thus, in spite of the advantages of the normal classroom , the virtual classroom or E- learning has its own advantages in developing the learning skills through its multi faceted teaching aid's and technique. Thus E-learning or virtual learning has evolved as a significant platform to provide teaching and learning process both to the students and teachers on the whole. For this study done on "Imparting Learning Skills via Teaching Aid's: A reflective analysis of E-learning Practices." the researcher has collected 101 respondents from college students with the help of an Interview Schedule through Google form which itself is an online tool. The Collected data were analysed and interpreted with the help of SPSS Reliability test, Factor Analysis and Percentage Analysis.*

**Keywords:** Learning Skills, Normal Learning, Skill Development, Teaching Aid's and Virtual Learning

### INTRODUCTION:

Technology had highly influenced the twenty first century human Life. Teaching and Learning methods has also been modernized in the technological sway. Classical methods of learning has been the best method so far in learning and teaching, However, there is no question that e-learning is greatly improving people's standard of living. But, many people still lack
